Culinary Resource • Pan-Frying Basics

Resource Description

Learn the basic principles of pan-frying through a simple cooking demonstration. This resource introduces how to cook ingredients in a hot pan using a controlled amount of oil or fat while developing a golden, flavorful surface.

What You Can Learn

- **Preheat the pan:** Allow the pan to become hot before adding the ingredient.
- **Use suitable heat:** Medium to medium-high heat can help create good browning without burning the outside.
- **Avoid overcrowding:** Leave enough space in the pan so ingredients cook and brown rather than steam.
- **Monitor the cooking:** Watch the colour, texture, and cooking progress and turn the food when appropriate.
- **Finish safely:** Make sure the food reaches a safe level of doneness appropriate for the ingredient being cooked.

Practical Tips

Tip	Why it matters
Dry ingredients before cooking	Reduces excess moisture and helps improve browning.
Do not move food constantly	Leaving it in contact with the pan helps develop colour and texture.
Control the heat	Lower the heat if the surface is browning too quickly.
Use appropriate utensils	Helps turn and handle food safely without damaging it.

Kitchen Safety

- Keep hands and surfaces dry when working around hot oil.
- Use care when placing ingredients into a hot pan to avoid splashing.
- Keep pan handles positioned safely away from the edge of the cooking area.
- Never leave active cooking unattended.
